TIMING SYSTEMS**

 **MICROGATE**

# RTPRO

RTPRO is a professional, portable stopwatch that combines innovative standards with the greatest accuracy. The large touchscreen, ease of use and different connection possibilities make it a unique device suitable for all application scenarios.

## BATTERY 8H+

- Lithium-ion battery
- Runtime > 8 hours
- USB PD 20V Fast Charge power supply

## WIRELESS CONNECTIVITY

- Bluetooth: 4.2
- WiFi

## CABLE CONNECTIONS

- 2 USB A Host ports
- 1 USB C port for charging and PC connection
- 2 x 4 mm bushings for START and STOP main lines, expandable to 4 with specific adapter
- Connector to HiLink and LinkGate-DecRadio

## THERMAL PRINTER

- Thermal printer with an extended range (-20°C +60°C)
- Thermal paper roll standard width 57mm, max. diameter 35mm
- Easy roll paper replacement

## 5" TOUCHSCREEN

- TFT-LCD 5" display
- Capacitive touch, extended range (-20°C +60°C)
- Auto-adaptive sensor for brightness

## SPECIFIC PROGRAMS

- Single Starts
- Group Starts
- Light Training
- Show Jumping
- PC Online
- Simple Stopwatch
- Parallel

## RTPRO ERGONOMIC BACKPACK

The new RTPRO ergonomic backpack makes it easy to carry a timing system complete with start, finish and 2 splits.

The backpack enables carrying a start-finish system with 2 splits.

The backpack can be divided into two to allow separate start and finish installation, thus cutting equipment assembly time in half.

# ADVANCED CONFIGURATION

## Complete timing solution

The solution for Ski Schools and the most demanding Teams that, in addition to needing high performance in all conditions, can trust in FIS certification and the possibility of using the system in both training and competition, via both radio and cable.

Building on the Racetime SF System, which embraced rugged, flexible and robust radio communication, the Pro Series permits exploiting the latest and most innovative technology to take advantage of new features.

Simple user interface, easy installation, portability and connectivity are the building blocks of the new range.

Approved system

**Start**

**HISTART** The new starting gate, with no electromechanical contacts, ensures maximum accuracy in all conditions.

**HILINK** The most popular and reliable radio system on the market in a new look. 2 versions of 10mW and 500mW with a choice of 69 frequencies. The only module that can be used both as an encoder and as a decoder. Touchscreen, connectivity and maximum usability.

Optional

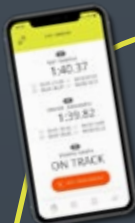

**HISMART** The sensor with an integrated Bluetooth module allows identifying the athlete, ensuring fully automatic timing and avoiding recording false passes.

**HISENS** The world's first photocell without a lens, which permits increasing the optical range (beyond 30 metres) and improving efficiency.

**Finish**

**HITIMING**

**APP** The fast and easy connectivity of the PRO Series system enables taking full advantage of the features of the new APP, which enables viewing and sharing test results and rankings in real time.

# LIGHT CONFIGURATION

## Simplified timing solution

After having developed the most highly appreciated solution, the Pro one, FIS-approved and used by a large number of Schools and Teams, we decided to offer a simpler and more cost-effective solution, specifically for all those sports groups that require simpler, but still accurate and reliable timing.

The individual devices proposed are again those of the Pro series and therefore can be expanded later or potentially used in more complex configurations.

Thanks to the dedicated HITIMING APP, the "main" smartphone will have to connect via Bluetooth to one of the devices at the start or finish. From here it can manage displaying the results and sharing them with all group members.

Low-cost training system

# HITIMING

## High-performance timing systems Made in Italy, since 1989.

For us, time is a precious resource, not just a unit of measurement. Since our inception, we have been focusing on designing modular, high-precision solutions suitable for all kinds of competitions, training and sports performance.
